

Tech Treasure Hunt – Instructions for Solving Levels

1. Debug the Level 1 File:

This file is essential for solving all further levels.

2. Understand the Encrypted Passwords:

Some passwords are already pre-encrypted.

The shift value required for decryption will be provided after solving each level.

3. Decrypting the Passwords:

Enter the given encrypted password and the shift value.

The correct shift value can be determined from the output of previous levels.

The file will generate the decrypted text, which serves as the password for the next level.

4. Unlocking Next Levels:

The decrypted text from Level 1 will serve as the password for Level 2.

Similarly, each level's decrypted text is the password for the next level.

5. Continue Until Completion (QR CODE):

Follow the same process until you solve all levels successfully.

Final Challenge

Unlock the QR Code Zip File (password from Level 3), scan the QR Code inside, and fill the form with all shift values. The winner is decided based on form submission.

****(The instruction and encrypted password for each level, as given in the instruction table, are used in Level 1 to obtain the decrypted password for the corresponding file.)**

LEVELS	ENCRYPTED PASSWORD	INSTRUCTION
LEVEL 01	BuggedStart	decrypted password
LEVEL 02	Y }U yr	given shift value (13)
LEVEL 03	<8<JziquVw Nw}vI	Find the mean, round the value, and that is your shift key.
QR CODE	FrpslohVxffhvv	Find the sum of all values, and the last digit of the answer is your shift key.
